

Runtime Reporting

Runtime Features:

- On/Off Status of device
- Accumulated hours
- Comprehensive reports
- Customizable alerts
- API integrations
- Landmark information
- Start, stop & 10 minute in-motion updates

What Runtime Enables:

- Easy Installation with a simple 2-wire connection
- Flexible voltage ranges from +5VDC to +48VDC
- LEO satellites working through cellular dead zones
- Multiple units of data collected from hours run to mileage

➔ How Runtime Will Change the Way You See Your Equipment.

With run time, you get hourly updates on your equipment to see customizable alerts for machine information. Through TGI Connect's reliable satellite network, a wide range of information is available to see accumulated hours of run time and maintenance reminders integrated into third-party apps to utilize your equipment.

➔ Who is Runtime for?

Runtime is perfect for transportation companies, oil and gas, construction, railway, forestry, mining, and road maintenance operations. Measure runtime and equipment mileage to inform your business decisions. Runtime excels in measuring hourly operations for heavy machinery, mining equipment, generators, pumps, and temperature control units.

How It Works

- Install the SmartOne Solar on the asset using a flat 4" x 9" surface with a clear view of the sky.
- Connect the Runtime feature to the asset's switched power source using a simple 2-wire connection.
- The device detects when the asset is On or Off and tracks accumulated operating hours through a reliable satellite connection.
- View runtime hours, asset status, maintenance hours, reports and alerts through TGI Connect software and the mobile application.

Feature	Benefit
Reliable Satellite Connection	Provides reliable reporting without relying on cellular towers. The device can work anywhere.
Equipment On/Off Status	Quickly see whether an asset is operating or turned off.
Accumulated Runtime Hours	Track actual operating hours so maintenance can be based on equipment use rather than distance travelled.
Maintenance Tracking	Set maintenance timers and view time remaining or overdue maintenance based on operating hours.
Customisable Alerts	Create alerts based on accumulated hours, runtime during a set period, On/Off events, geofences and shifts.
Mobile Application	View asset location, On/Off status and runtime hours, and view or reset maintenance hours from the TGI Connect mobile app.
